

INTRO DIGITAL

The UPM Raflatac Digital range offered by Antalis meets the needs of shorter runs, personalisation and variable data and includes a wide range of products suitable for multiple substrate types, visual effects and labeling conditions.

Print quality is superb across most sheet-fed digital devices and excellent lay-flat properties provide reliable runnability and output. As you will see from these Quick reference range charts, most products are suitable for dry toner presses and many are either HP indigo suitable or certified. Discover the range and application possibilities.

Quick reference guide

LITHO

INTRO LITHO

For conventional printing, Antalis offer a wide range of UPM Raflatac products, with a good selection of face materials, adhesives and backings to cover all the aesthetic and performance requirements of your applications. Importantly too, sustainability is ensured, with manufacturing plants being ISO14001 certified, many paper based labels FSC certified, and the water-based adhesives are free from solvents.

Furthermore the RAFNXT+ materials are the world's first label materials, verified by the Carbon Trust, to help mitigate climate change compared to the standard label range. The combination of new product design reducing manufacturing and transport emissions, plus the use of optimised carbon sink FSC forests, results in positive climate action. Discover the range of label materials for litho printing here.
